

UVJ Technologies

Contributing to the quality of life

-  Bio pharmaceuticals
-  Molecular diagnostics and genetics
-  Biochemical cataloging
-  Clinical research services
-  Contract manufacturing

UVJ Technologies is developing business opportunities in the domains of medical biotechnology, industrial biotechnology and clinical research services. We are providers of instrumentation, supplies software and services to life science and chemical analysis markets. The mission of UVJ Technologies is to contribute to the quality of life by providing innovative analysis products and services to its customers.

Domains

Biopharmaceuticals, molecular diagnostics and genetics, biochemical cataloging, clinical research services and contract manufacturing.

Clinical research services

UVJ Technologies provides clinical research services and software development and integration of biomedical equipments used in pharmaceutical industry. UVJ Technologies has experience in developing 21 CFR Part 11 compliant software systems with CMMI practices. Assay development with new bio medical equipments, validation and verification of biomedical equipments are areas where UVJ Technologies has proven record of excellence.

21 CFR Part 11 Consultancy and software development

21 CFR Part 11 Consultancy and software development is one that every bio-medical equipment manufacturer will need so as to get FDA approval more easily. Experience in real time data capturing and rendering the data into human readable format and analyzing the data for precise information is what we do on a daily basis.

Automation

Integration of existing bio medical equipments with new control systems and designing new workflow and reducing the human intervention will save billions of dollars in research areas. This is another area of expertise UVJ technologies has for Pharmaceutical companies. We integrate and design workflows and provide better solutions for keeping good lab practices and following industry standard protocols with ease.

Molecular diagnostics and genetics

UVJ Technologies has a product developed for research in molecular biology and genomics. The product is christened as **CBAT** (Calpine Bio Analytical Tool). This product is a suite of tools for Genomics and Proteomics research. The tools will allow you to identify the structure of a protein, help you in homology modeling, analysis of gene regulation and protein expression. CBAT will also help in gene cloning.
